Q.no1: Simple Interest Calculator

Problem Statement:

A bank wants to calculate simple interest.

Solution:

```
#include <stdio.h>
float calculateSI(float p,float r,float t){return (p*r*t)/100;}
int main(){
float p,r,t,si;
scanf("%f%f%f",&p,&r,&t);
si=calculateSI(p,r,t);
printf("Simple Interest = %.2f",si);
return 0;}
```

Sample Input/Output:

Input: 1000 5 2
Output: Simple Interest = 100.00

Q.no2: Student Result System

Problem Statement:

Calculate total and percentage.

Solution:

```
#include <stdio.h>
int total(int a,int b,int c,int d,int e){return a+b+c+d+e;}
float per(int t){return t/5.0;}
int main(){
int a,b,c,d,e,t;
scanf("%d%d%d%d%d",&a,&b,&c,&d,&e);
t=total(a,b,c,d,e);
printf("Total=%d
Percentage=%.2f",t,per(t));
return 0;}
```

Sample Input/Output:

Input: 80 70 90 85 75
Output: Total=400 Percentage=80.00

Q.no3: ATM PIN

Problem Statement:

Check PIN.

Solution:

```
#include <stdio.h>
int main(){
int pin;
scanf("%d",&pin);
if(pin==1234) printf("Access Granted");
else printf("Invalid PIN");
return 0;}
```

Sample Input/Output:

Input: 1234
Output: Access Granted

Q.no4: Palindrome

Problem Statement:

Check palindrome.

Solution:

```
#include <stdio.h>
int main(){
int n,rev=0,t,r;
scanf("%d",&n);
t=n;
while(n>0){r=n%10;rev=rev*10+r;n/=10;}
if(t==rev) printf("Palindrome");
else printf("Not Palindrome");
return 0;}
```

Sample Input/Output:

Input: 121
Output: Palindrome

Q.no5: Library Fine System

Problem Statement:

Calculate fine based on late days. If days > 5 then ₹2 per day, otherwise no fine.

Solution:

```
#include <stdio.h>
int calculateFine(int d){
if(d>5) return d*2;
else return 0;
}
int main(){
int d,f;
scanf("%d",&d);
f=calculateFine(d);
if(f==0) printf("No Fine");
else printf("Fine = %d",f);
return 0;}
```

Sample Input/Output:

Input: 7
Output: Fine = 14
